**Subject:** NW Natural, Revised Fill WBZ Trench Work Plan SAP/QAPP

Hi, Dana:

EPA completed a review of the revised Gasco Fill WBZ Trench SAP/QAPP. The SAP/QAPP is generally acceptable with the following minor comments:

- 1.) Title Page - The title of the document should include the word "Focused" as it is evident this term qualifies based on the use of this term on previously submitted documents that describe procedures not applicable to the work described.
- 2.) Page 3, Section 2.2, last sentence - MW-42 is missing "F", which should be added to avoid misinterpretation of the well ID reference.
- 3.) Figure 2 - The Siltronic Property Monitoring Wells referred to in this document are shown twice on the map with different symbology and should be corrected. One symbol indicates these wells are existing extraction wells, while the other symbol indicates they are existing monitoring wells.
- 4.) Figure 3 - The Siltronic Property Monitoring Wells should be presented with unique symbology and presented in the legend as "Siltronic Property Monitoring Wells (installed August 2013)."

Let me know if you have any questions—and thanks for the call today. Best of luck in the meeting tomorrow, we're on board with DEQ on the approach!

S
